

WATER CONSERVATION PROGRAMME

The Aklan State University with its vision on sustaining development is committed to a long term conservation, development and management of the watershed resources in particular. The administration, through a memorandum order, has assigned a regular utility personnel to manage and maintain the water system within the University.

Water Reservoir Tank

Presence of a deep well as source of water for the entire University supplying the water needs of its projects such as swine productions, high-value crops, orchard, nurseries for fruits and forest trees, research activities, and for cleaning of the University's buildings and facilities.

Water Catchment Basin Vicinity

Water reservoir at the foot of the Manduyog Hill, located at Aklan State University Banga Campus.

Water Station serves as potable water source

A water refilling station was established at the Aklan State University, Ibajay Campus to ensure safe and potable drinking water.
